APTECH COMPUTER EDUCATION

Semester 5 Modular Exam: Canonical Recovered Question Bank

Course Coverage: Software Engineering | Securing Web Apps | Quality Assurance
Total Questions: 13 | Passing Score: 40%

Section: Securing Web Applications

1. What is obtained when SSL and HTTP are combined together?

a) PKI

b) URL

c) **HTTPS**

d) PKC

2. What are such cookies called that last only for a single session and are used to store the expiry information?

a) Persistence cookies

b) **Transient cookies**

c) Tracking cookie

d) Temporary cookie

3. In URL Based Session IDs, generally where is the URL information sent?

a) HTTP POST

b) **HTTP REFERER field**

c) HTTP GET

d) Session ID

4. Which malware replicates itself and creates duplication of files?

a) **Worm**

b) Virus

c) Adware

d) key logger

5. Which virus mutates itself with each infection?

a) Boot Sector virus

b) File Infector virus

c) **Polymorphic virus**

d) Encrypted virus

Section: Software Engineering Principles & Formal Methods

6. What is an algebraic axiom?

a) Algebraic axioms describe the properties of a solution without describing how the solution will be obtained.

b) Algebraic axioms provide a mechanism for specifying complex decision logic.

c) **The axioms specify the fundamental properties of a system.**

d) Algebraic axioms are used to specify the changes in the state of a system as a function of changes.

7. What is an implicit equation?

a) **Implicit equations describe the properties of a solution without describing how the solution will be obtained.**

b) Implicit equations provide a mechanism for specifying complex decision logic.

c) The implicit equation specifies the fundamental properties of a system.

d) Implicit equations are used to specify the changes in the state of a system as a function of changes.

8. Which of these are variations of systems that are possible during identification of hardware resource allocation?

1. Independent – Each software component executes on a separate processor.
2. Shared – All software components execute in the same processor as schedulable units of concurrency.

a) Statement 1

b) Statement 2

c) **Statement 1 and 2**

d) Neither Statement 1 nor statement 2

Section: Quality Assurance, Verification & Testing

9. Which Level of certification is awarded to an organization that has reasonable statistical control over product quality?

a) Level 2 - Repeatable

b) Level 5 - Optimizing

c) **Level 4 - Managed**

d) Level 3 - Defined

10. Identify the steps that form part of the Quality Improvement Paradigm. (Select all that apply)

a) **Set Goals**

b) **Design the process to meet the goals**

c) **Execute processes**

d) **Analyze the data**

11. The two perspectives of quality are customer satisfaction and adherence to _____.

a) **specified cost**

b) **required specifications**

c) specified team size

d) specified design

12. The defects reported during the testing phase by time interval is known as _____.

a) Defect backlog

b) Defect intervals

c) **Defect arrivals**

d) Defect rate

13. Which Level of certification is awarded to an organization that has invested considerable capital and time in process automation and improvement?

a) Level 3 - Defined

b) Level 2 - Repeatable

c) Level 4 - Managed

d) **Level 5 – Optimizing**
