1. Which of the fallowing events will cause a thread to move from the waiting state directly to the Runnable state?

- The start() method is invoked on the Thread object (this is the answer)
- Variables can be protected from concurrent access problems by marking them with the synchronized keyword.
- The resume() method is invoked on the Thread object.
- The run() method is invoked on the Thread object.

2. Which of the following can be used for Generic classes?

- static class
- Enum
- Exception
- Anonymous inner class (this is the answer)

3. Which of the following is not an advantage offered by the JDBC

- Platform independence
- Vendor independence
- Program independence
- Ease of maintenance (this is the answer)

4. Which expression will extract the substring 'cas' from the string defined by String str = 'cacaso'

- str.substring(2,2)
- str.substring(2,3)
- str.substring(3,2)
- str.substring(2,5) (this is the answer)

5. Which of the following statements about CachedRowSet objects is false?

- A CachedRowSet object created using the default constructor has a default SyncProvider object associated with it. (this is the answer)
- Data can be written back to the database simply by invoking the acceptChanges() method
- CachedRowSet objects are serializable.
- Data exchange with CachedRowset objects is faster as compared to JDBCRowSet objects since the data is cached in memory.

6. A thread can created by extending the Thread class. Which of the following methods are defined in the class Thread?

- wait(). notify() and run()
- start() and run(). (this is the answer)
- start(). wait(). notify() and run()
- run() and terminate()

7. What will be the result of invoking the wait() method on an object without ensuring that the current thread holds the lock of the object? Select the correct answer.

- The code fails to compile.
- The wait method is executed normally.
- An IllegalMonitorStateException is thrown if the thread does not own the lock of the object. (this is the answer)
- The thread gets blocked until the thread acquires the lock of the object.

8. The benefit of..... is the ability to define a behavior that is specific to the subclass type.

- Overloading
- Overriding (this is the answer)
- Inheritance
- Abstraction

9. Which of the following framework helps work with several process to boost the performance of an application?

- Thread Framework
- Fork/Join Framework (this is the answer)
- Wait-Notify
- Synchronization

10. Localization is the process of adapting software for a specific.....or.....by adding locale-specific components and translating text. (multiple choice)

- Country
- Region (this is the answer)
- Culture
- Language (this is the answer)

11. Internationalization textual data such as messages and GUI component labels are.....and.....(multiple choice)

- hardcoded
- not hardcoded (this is the answer)
- received as input from the user
- dynamically read from properties file (this is the answer)

12. Which of the following interfaces provide methods to submit large collections Callable of objects.

- ExecutorService (this is the answer)
- ScheduledExecutorService
- RecursiveAction
- Executor

13. Which of the following methods needs to be invoked to obtain an instance of the Console class?

- System.command();
- System.console(); (this is the answer)
- System.new();
- Console.newInstance();

14. Which class compresses the data present in an input stream?

- Inflater
- Compressor
- Deflater (this is the answer)
- Zip

15. .....exception is thrown if there is an I/O error while iterating over the entries in the specified directory.

- DirectoryIteratorException (this is the answer)
- IteratorException
- DirectoryReadException
- IOException

16. Which of the following patterns represents a file name ending with an extension of .java?

- \.java
- *.java (this is the answer)
- *.java*
- **.java

17. The.... method retrieves and removes next watch key and waits if none are yet present.

- void poll(long timeout, TimeUnit unit)
- WatchKey poll(long timeout, TimeUnit unit)
- void take()
- WatchKey take() (this is the answer)

18. .....is the process of designing an application so that it can be adapted to various languages and regions without engineering changes.

- Localization
- Finalization
- Serialization
- Internationalization (this is the answer)

19. Which one of the following should you use to create a compound message in the internationalization process?

- Exception class
- Enum class
- MessageFormat class (this is the answer)
- Thread class

20. Which of the following statements is false?

- The executeQuery() method is used to execute SQL statements which return more than one result set. (this is the answer)
- The executeUpdate() method is used to execute SOL DDL statements.
- The execute() method returns true when a result set object is created due to the execution of an SQL statement.
- The executeUpdate() method returns an integer indicating the number of rows affected by the execution of the SQL statement.

21. Identify the feature of an internationalized application

- Autorecompilation
- Same executable runs worldwide (this is the answer)
- GUI component labels are stored inside the source code
- Only one properties file is required.

22. In internationalization the language is represented using..... and.....ISO Code 639. (multiple choice)

- alpha1
- alpha2 (this is the answer)
- alpha3 (this is the answer)
- alpha4

23. Which of the following copy options are supported by the copy() method of the File class?

- COPY_ATTRIBUTES (this is the answer)
- NOFOLLOW_LINKS (this is the answer)
- CREATE_NEW
- REPLACE_EXISTING (this is the answer)
