1. Which of the following analysis relates to the functions and sub-functions to be performed by the system?

- Performance
- Design
- Program
- Functional

2. Which of the following statements is not an advantage of the linear sequential model?

- It allows for a clear demarcation between two phases
- It emphasizes on requirements, before designing the solution
- It is based on a document driven process
- It ensures a proper forward-looking approach to so are development

3. Identity the phase that is not a part of the linear sequential model?

- Analysis
- Architecture
- Design
- Code

4. In the Waterfall model, which of the following activities are not the part of the Software Requirements Analysis' phase? (Multiple options)

- Testing
- Data migration
- Understanding the information domain
- Documenting the requirements

5. Which of the following statements are the advantages of Prototype model? (Multiple options)

- Active involvement of users in the project
- Better understanding of the desired project
- Complex modules are identified for quick Implementation
- Feedback is not shared for each prototype solution

6. _____is a process to determine if a phase of software development fulfills the requirements established.

- Verification
- Unit testing
- Validation
- Testing

7. Which one of the following statement is not true for SDLC?

- As businesses evolve, their services need to evolve.

- Increasing need for automation of different everyday services.
- No errors in a software.
- Integrate components with other parts of the application

8. Arrange the following phases of an SDLC in proper sequence:

1. Planning and Requirement Analysis

2. Deployment or Maintenance

3. Testing

4. Designing Architecture

5. Building or Construction

6. Defining Requirements

- 3, 6, 5, 4. 1
- 3, 5, 6, 4, 1, 2
- 1, 6, 4, 5, 3, 2
- 1, 2, 3, 4, 5, 6

9. Identify which of the following statements correctly identify the objectives to be considered while conducting system analysis. (Multiple options)

- Identification of customer needs.
- Establishing cost and schedule constraints.
- System evaluation for work load.
- Creating a system design.

10. Which of the following activities are to be performed during the implementation phase in SDLC? (Multiple options)

- Creation of an installation plan.
- Implementation of physical procedures.
- Running the scheduler of project.
- Implementation of legal procedures

11. _____ is also called as Quality Assurance.

- Coding
- Testing
- Design
- Implementation

12. In the Waterfall model, which of the following activities are not the part of the Software Requirements Analysis phase? (Multiple options)

- Testing

- Data migration
- Understanding the information domain
- documenting the requirements

13. Which of the following statements are true regarding the System and Architecture Design phase of the V Model? (Multiple options)

- Referred to as high-level design phase
- System test plain is created to validate the system design
- Unit test design is developed to test component functionality
- Black box testing is performed in this stage

14. Which of the following statements is true for component-based development model?

- Only appropriate for computer hardware design
- Work best with object technologies that provide them technical framework
- Define the specifications for computer design
- Verify the correctness of the system
