1. In the Struts 2 framework _____ sit between controller and action.

- JSP
- Enterprise Services
- JavaBean
- Interceptors (this is the answer)

2. _____ class is responsible for the execution of the action including the sequential invocation of the Interceptor stack.

- AbstractInterceptor
- ActionInvocation (this is the answer)
- Checkbox
- Conversion

3. Once the ActionInvocation class contains all the required information, it exposes the _____ method to the framework.

- invoke() (this is the answer)
- execute()
- intercept()
- void()

4. Which of the following statements are not true about the role of the Model component of MVC architecture?

a. It encapsulates the domain logic of an application.
b. It manages information and notifies observers whenever that information changes.
c. It contains only data and functionality that are related by a common purpose.
d. It makes it very difficult to map real-world entities into a model.

- a, b and d
- Only d (this is the answer)
- Only a
- b and a

5. Which of these statements is true and which is false about Struts 2 features?

Statement A: Struts 2 achieved easy development of Web application by reducing XML configuration and introduced annotation based configuration.

Statement B: in Struts 2 Action classed are Plain Old java Objects (POJO) that are used for simplifying the development and testing of the code.

- Statement A is FALSE and Statement B is TRUE
- Statement A is TRUE and Statement B is FALSE
- Both of the statements are TRUE (this is the answer)

6. Which of the following are the correct methods which a subclass can override for customizing ActionForm class? (Choose two correct answers)

- reset() (this is the answer)
- submit()
- validate() (this is the answer)
- execute()

7. Which of the following options shows tag for a valid form submission in Struts framework?

- <html:page-form action="/some-action-do" >
- <pip:webaction="/some-action-do" >
- <html:web-form action="/some-action-do" >
- <html:form action="/some-action-do" > (this is the answer)

8. _____ annotation helps to set the path of the action URL

- @Namespace (this is the answer)
- @Action
- @Result
- @Result and Results
